#### **DETAILED ACTION**

1. In response to the previous office action, claims 1 and 30 have been amended. Claims 1-5, 8-13, and 30-36 have been examined.

## Claim Rejections - 35 USC § 101 and 35 USC § 112

2. In view of Applicant's amendments, all previous rejections under 35 U.S.C. 101 and 35 U.S.C. 112 are withdrawn.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1, 4, 8, 9, 11, 12, 13, 30-32, and 34-36 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,269,379 to Hiyama et al. in view of U.S. Patent No. 6,694,434 to McGee et al. further in view of U.S. Patent No. 5,191,611 to Lang further in view of U.S. Patent No. 5,319,776 to Hile et al.

As per claim 1, Hiyama discloses a system for acquiring images from an endoscope (see column 3, lines 54-55). Each image constitutes a frame. The system has memory for storing images and operating code, which is loaded from a hard disk at power-up (see column 4, lines 3-5 and column 6, lines 30-32), a viewing monitor for displaying frames (see column 4, lines 28-31).

Hiyama does not disclose the use of an encrypted registry or measures to directly protect against computer viruses, but notes that it is desirable to protect against viruses (see column 8, lines 66-67).

McGee discloses that processes be checked against a registry (see column 5, lines 13-20) before being started (see column 4, lines 20-23) and that registry information is signed (encrypted) using a private key (see column 4, lines 35-39), and authenticated (decrypted) using a public key (see column 5, lines 10-12), and further suggests that it would be desirable to provide a mechanism that reduces the likelihood of an unauthorized application being run, such as one that contains a virus (see column 2, lines 42-48).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to implement security on the system of Hiyama in the manner disclosed by McGee, as it would be desirable to provide a mechanism that reduces the likelihood of an unauthorized application being run, such as one that contains a virus.

Since it only uses signatures, the system of Hiyama and McGee does not search the decrypted data for directory entries.

Application/Control Number: 09/667,742

Art Unit: 2134

Lang discloses a system for protecting material on storage media that includes the encrypting of the entire directory, and the decrypting of the directory before searching it (see column 11, lines 57-66), and further notes that it is a level of protection that users can only see and use the directories for the zones for which they have access privileges (see column 15, lines 33-36).

Therefore it would have been obvious to one of ordinary skill in the art at the time the invention was made to encrypt the entire directory and then decrypt it before searching it, as disclosed by Lang, so users can only see and use the directories for the zones for which they have access privileges.

Hiyama, McGee, and Lang also do not disclose a means by which a file may be tested for a computer virus before being installed on a hard disk.

Hile discloses a computer virus safeguard system wherein a file being copied to a hard disk is tested for virus signatures before being copied to the hard disk (see column 4, lines 23-47). Hile further suggests that systems that do not do this cannot totally prevent a virus from attacking or spreading (see column 1, lines 51-54).

Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the system of Hiyama, McGee, and Lang by testing a file being copied to a hard disk for virus signatures, as disclosed by Hile, as systems that do not do this cannot totally prevent a virus from attacking or spreading.

Regarding claims 4, 8, and 9, McGee discloses that the system checks if the application being started is on the registration list, and, if not, notifies the user about the potential virus and gets instructions using a graphical user interface (see McGee,

column 7, line 63 to column 7, line 9 and column 7, lines 41-65), and kills the process if the user does not give permission (see McGee, figure 3a).

Regarding claims 11 and 34, Hiyama, McGee, and Lang do not disclose an option to delete files from storage after discovering that they may be infected.

Hile further discloses a virus safeguard wherein infected files are deleted from storage (see column 7, lines 17-44), and further suggests that prevents the virus from spreading to other computer systems that communicate with that system (see column 2, lines 4-11).

Therefore, it would be obvious to one of ordinary skill in the art at the time the invention was made to further modify the invention of Hiyama, McGee, and Lang by adding an option to delete files from storage, as disclosed by Hile, in order to prevent the virus from spreading to other computer systems that communicate with that system.

Regarding claims 12 and 13, after the user is notified that an application is requesting to execute (see McGee, column 8, lines 42-45), a second signal is sent to the user asking whether execution privileges should be granted (see McGee, column 8, lines 45-51), resulting in the application being registered.

Hiyama, McGee, Lang, and Hile do not disclose the use of actuators in the user interfaces.

Regarding all limitations involving the use of virtual actuators in user interfaces,

Official notice is given that the use of actuators for user dialog in graphical user interfaces is well-known in the art, as they make programs more user-friendly.

Art Unit: 2134

Therefore, it would be obvious to one of ordinary skill in the art at the time the invention was made to implement the invention of Hiyama, McGee, Lang, and Hile using actuators in the user interfaces, in order to make the system more user-friendly.

Regarding claims 30-32, 35, and 36, the system disclosed by Hiyama constitutes a computer.

4. Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,269,379 to Hiyama et al. in view of U.S. Patent No. 6,694,434 to McGee et al. further in view of U.S. Patent No. 5,191,611 to Lang further in view of U.S. Patent No. 5,319,776 to Hile et al. as applied to claim 1 and further in view of U.S. Patent No. 5,881,151 to Yamamoto.

Hiyama, McGee, Lang, and Hile do not disclose checking for checksums or file size.

The virus diagnosing system disclosed by Yamamoto checks for a file using techniques including checksums and size checks before executing a program (see abstract), and Yamamoto further suggests that this enables a discrimination to be made to minimize the damage of the virus (see column 2, line 66 to column 3, line 2).

Therefore, it would be obvious to one of ordinary skill in the art at the time the invention was made to further modify the invention of Hiyama, McGee, Lang, and Hile by checking for checksums and size, as disclosed by Yamamoto, to minimize the damage of the virus.

Art Unit: 2134

5. Claims 5, 10, and 33 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 6,269,379 to Hiyama et al. in view of U.S. Patent No. 6,694,434 to McGee et al. further in view of U.S. Patent No. 5,191,611 to Lang further in view of U.S. Patent No. 5,319,776 to Hile et al. as applied to claims 4, 9, and 32, above, and further in view of U.S. Patent No. 6,266,773 to Kisor et al.

Hiyama, McGee, Lang, and Hile do not disclose a log of events.

Kisor discloses a computer security system wherein historical events are compiled, so that the real time activity of a program can be monitored to see whether the real time activity fits within the stored patterns.

Therefore, it would be obvious to one of ordinary skill in the art at the time the invention was made to modify the invention of Hiyama, McGee, Lang, and Hile by compiling historical events, as disclosed by Kisor, so that the real time activity of a program can be monitored to see whether the real time activity fits within the stored patterns.

## Response to Arguments

6. Applicant's arguments filed 5 June 2006 have been fully considered but they are not persuasive.

In response to Applicant's arguments that the protection mechanisms in the cited art are user-specific, unlike Applicant's disclosed invention, it is noted that the claims as

presented in no way preclude such an arrangement. If the cited art discloses a claimed invention insofar as it is recited, then the rejection is proper.

#### Conclusion

7. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Matthew E. Heneghan, whose telephone number is (571) 272-3834. The examiner can normally be reached on Monday-Friday from 8:30 AM - 4:30 PM Eastern Time.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jacques Louis-Jacques, can be reached at (571) 272-6962.
